§ Introduction

Article 59 of the new [Public Procurement Directive 2014/24/EC](#) introduced a new concept, the **European Single Procurement Document (ESPD)** which is a self-declaration document intended for preliminary evidence in a public procurement procedure. By mapping out equivalent certificates between Member States, the ESPD replaces certificates issued by public authorities or a third party involved in a procedure. It is thus a valuable facilitator for cross-border participation of a greater number of potential operators in public procurement procedures and a valuable tool for integrating the European Single Market.

The European Commission (EC) has developed a data model and 'semantic assets' for the exchange of the ESPD between any Procurement stakeholder's system. This Wiki aims to be a first landing point for organisations interested in using the model and assets in compliance with the Directive.

2. Changes on the ESPD-EDM webpages

❖ Previous versions:

The screenshot displays the 'Developer Docs' for 'ESPD EDM' version 2.1.1. The page features a top navigation bar with links to Home, Products, Resources, and Helpdesk, along with a search bar. A left sidebar lists other products like 'eForms SDK' and 'eProcurement Ontology', and provides version selection buttons for each. The main content area is titled 'ESPD Exchange Data Model (ESPD-EDM)' and shows the current version 'v2.1.1'. Below the title, there are sections for 'Resources' and 'Requirements'. The 'Resources' section lists links to the implementation guide, distribution package resources, and release notes. The 'Requirements' section lists 'Java 8' and 'Maven 3'. A 'Contents' sidebar on the right lists 'Resources', 'Requirements', 'Installation', 'With Maven', and 'With Gradle'.
