ESPD Exchange Data Model (EDM)

Version 3.0.0

Introduction

The ESPD Exchange Data Model is the technical representation of the legal European Single Procurement Document. It is used to support interoperability between ESPD services provided all over Europe.

ESPD Wiki

To have a comprehensive view of what ESPD-EDM is and how to use it, we **strongly** recommend visiting the ESPD-EDM Wiki, that aims to be the **Unique Access Point** for all of its resources: documentation, tools, assets, etc.

Installation

With Maven

The recommended way to get started using the `exchange-model` in your Java project is with a dependency management system.

pom.xml

```xml
<dependency>
  <groupId>eu.europa.ec.grow.espd</groupId>
  <artifactId>exchange-model3</artifactId>
  <version>3.0.0</version>
</dependency>
```

> ℹ️ Version 3 of the `Exchange Model` has a different `artifactId`, i.e. `exchange-model3`, in order to support the usage of both versions at the same time inside a `Java` Maven project.

5. Interoperability testbed usage for ESPD
